WE NEED YOUR HELP!

St Agatha’s Edible Garden Working Bee
Tuesday 13th March 8:30am-11:00am

- Bring a shovel, gloves and hat
- If possible a wheelbarrow and garden fork

• Our goal is to build garden beds for our children to learn to grow and nurture their own veggies

• With your help, this will be our children smiling about the produce they have sown from a seed and are taking home to share at your table
• Get involved, make their day because you helped at school
• Morning tea for the workers!

“From little things BIG things grow!”

Developing edible gardens within school communities has encouraged healthy eating habits amongst thousands of children, parents and teachers.
School gardens enable students to:

- Care for other living things
- Learn ecological principles
- Draw on different learning styles
- Experience the joy of nature
- Practice leadership skills
- Make connections between science, social studies, math, language arts, and other subjects
- Be physically active
- Use all their senses

Students learn the life skill of growing organic food and the systems within them. The Edible school gardens program is a kid driven program!

- the students design the garden
- the students implement the garden with the local school community
- the students maintain the garden
- the students enjoy the food from the garden
- experience the different methods of cooking food from the garden. More
